

2013+ FR-S/BRZ/GR86 Anti-Dive Kit

What is Anti-Dive?

Anti-dive suspension geometry is achieved by leveling the pivot axis of the control arm, thus reducing the amount of “dive” on the front-end during the braking/corner-entry phase. This gives the car a more level stance under braking, allowing the driver to have a more controlled and balanced entry to the corner.

FEATURES:

- **Improved Chassis Balance**
 - Increased corner-entry feel and control
- **Reduced Front-End Dive**
 - More level chassis during braking phase
- **All Original Design**
 - CNC 6061-T6 billet aluminum offset lower arm support brackets
 - Hard anodized finish
 - CNC SS304 offset lower arm spacers
 - Race-developed, Championship-proven
 - Made in the USA
